

NiMH Series from GP

Performance Comparison

GP offers four distinct NiMH battery categories, each designed for specific needs. From Standard Batteries, delivering an optimal balance of charge retention, power output, and lifespan to our Endurance & Long-Life Series, designed to excel under more demanding conditions.

Standard Series

The advanced formulation of GP Batteries achieves one of the highest energy capacities available on the market.

- All round performance
- Longer run time between charges
- Long cycle life

High Drain Series

Specifically designed for applications requiring a substantial power supply. By efficiently managing high discharge rates these batteries provide excellent performance and reliability.

- Designed to withstand high power demands
- Excellent performance in high drain applications
- Long cycle life

Long Cycle Life Series

An excellent choice for applications demanding frequent and deep cycles. These cells maintain over 85 % of their original capacity after a full year.

- High energy capacity
- Minimal self-discharge
- Long cycle life

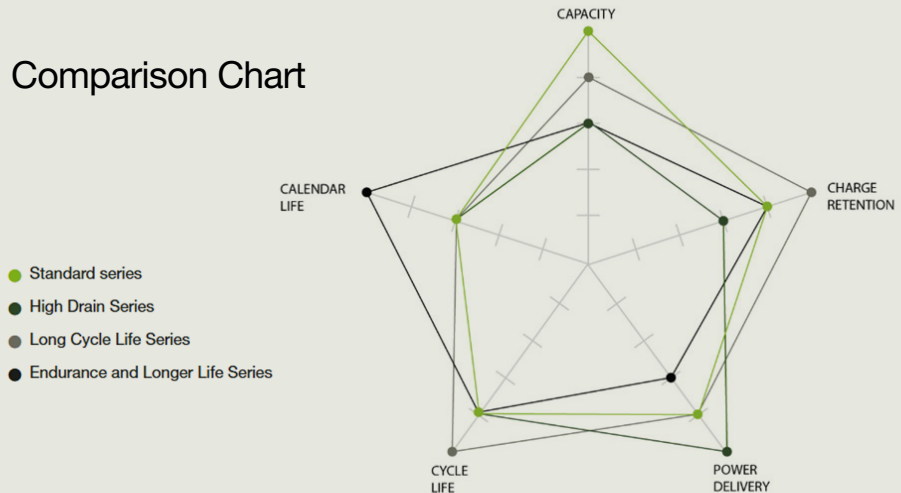

Endurance & Longer Life Series

Ideal for applications operating in extreme temperature conditions. Built with durability and robustness in mind.

- More than 500 cycles
- Operate in temperatures between -35°C - $+80^{\circ}\text{C}$
- Service life of up to 10 + years
